Profile

Backend engineer with 2 years at TCS Digital building banking-domain systems – payment engines processing **100,000+ transactions per run** and document platforms serving **1M+ documents**. Proficient in Core Java, Spring Boot, Microservices, Kafka, and cloud-native technologies, with a strong foundation in data structures, algorithms, and distributed system design.

Skills

Backend Frameworks / Tech: Core Java, JDBC, Servlets, JSP, Spring Boot 3, Spring MVC, Spring Data JPA, Spring Security, Spring Batch, Spring Cloud, Hibernate ORM, Spring Scheduler
Microservices & Messaging: Microservices Architecture, Apache Kafka, RabbitMQ, REST API Design, API Gateway, Service Discovery (Eureka), Event-Driven Architecture
Security: JWT, OAuth2, Spring Security, AES Encryption, HTTPS/TLS
Testing: JUnit 5, Mockito, Integration Testing, Hamcrest
DevOps & Cloud: Docker, Kubernetes (K8s), Helm, GitHub Actions (CI/CD), Maven, AWS Basics (EC2, S3, RDS), Microsoft Azure
Databases: MySQL, Redis (Caching & Pub/Sub), Elasticsearch, SQL Query Optimization
Tools: Git, ServiceNow, Postman, IntelliJ IDEA, Eclipse, Visual Studio, Swagger
Concepts: System Design, Clean Architecture, ACID Properties, CAP Theorem, Distributed Systems, Agile/Scrum, Load Balancing, Caching Strategies

Certifications

- **Oracle Certified Professional: Java SE 21 Developer (1Z0-830)** – Oracle — Jul 2026
- **Spring Certified Professional (2V0-72.22)** – Broadcom — Jul 2026
- Microsoft Certified: Azure Developer Associate – Microsoft — May 2026
- Microsoft Certified: Azure Fundamentals – Microsoft — May 2026
- Microsoft GitHub Actions – Microsoft — Jan 2026
- Microsoft GitHub Foundations – Microsoft — Dec 2025

Employment History

Software Development Engineer, Tata Consultancy Services (TCS) — Jul 2024 – Present

Electronic Document Management System (Documentum) – EuroClear

- Designed and delivered a full-stack **Business Continuity Planning (BCP) application** using **React and Spring Boot**, providing uninterrupted access to **1M+ enterprise documents** during Documentum downtime; built synchronization and migration modules using Documentum REST APIs.
- Engineered an **O365 mailbox ingestion pipeline** using **Microsoft Graph API and Spring Scheduler** to process documents from **20+ mailboxes**, implementing validation, retry, and error-quarantine mechanisms to handle **20,000+ documents/day** with minimal manual intervention.
- Developed an **automated monitoring and alerting platform** using **Spring Scheduler, JavaMail, Kafka, and ServiceNow REST APIs** for rendition backlogs, indexing queues, infrastructure health, and SLA tracking; reduced MTTD by **65%** and manual escalation effort by **50%**.
- Built a secured **DQuery utility** for parameterized DQL execution and a **ZIP extraction/injection module** supporting nested archives up to 50MB, reducing investigation effort by **60%** and fully automating O365-to-Documentum ingestion.
- Integrated a lightweight **AI-based document classification layer** using metadata keyword scoring to auto-suggest document types, reducing manual tagging effort by **30%**; contributed to production releases, ECR management, and incident resolution via **ServiceNow**.

Emerging Payments Orchestration System (EMPOS) – Bank of Montreal

- Built a high-volume **bulk payment processing engine** using **Spring Batch**, processing **100,000+ transactions per run** with chunk-based execution, skip/retry policies, and a **99.9% ingestion success rate**.
- Designed a **multi-frequency feedback generation system** using **Spring Scheduler and Quartz** to produce transaction status reports for **3 downstream banking teams**, eliminating manual reconciliation and saving **4 person-hours/day**.
- Developed a **transaction validation and reconciliation layer** using **Spring Data JPA, Hibernate, and MySQL**, achieving **sub-300ms write latency** at **10,000 records/min**; integrated **ServiceNow REST APIs** for automated incident creation, improving traceability by **40%**.

Projects

Online Dispute Resolution Platform – e-Adalat *(Personal Project)*

Spring Boot 3, Spring Security, Kafka, Docker, Kubernetes, Redis, WebRTC, MySQL, GitHub Actions

- Designed a **microservices-based Online Arbitration Platform** with **5+ independent services** (case management, scheduling, document vault, notifications, video hearings) using **Spring Boot 3 and Spring Cloud Gateway**, containerised with **Docker** and deployed on **Kubernetes** with zero-downtime rolling updates via **GitHub Actions CI/CD**.

- Built an **event-driven case workflow engine using Apache Kafka** to manage case lifecycle events (filing → assignment → hearing → verdict) asynchronously across services; implemented consumer groups and dead-letter queue handling, processing **1,000+ events/min** with guaranteed delivery and reducing inter-service coupling by ∼70%.
- Developed a **document vault service** with file upload, metadata search, and version control backed by **MySQL**; implemented **Redis caching** for frequently accessed case data, cutting average API response time by **45%**; secured all **30+ REST endpoints** with **JWT-based authentication and Spring Security** for JUDGE, LAWYER, PETITIONER, and ADMIN roles.
- Built a **real-time video hearing module** using **WebRTC and Spring WebSocket (STOMP)** for peer-to-peer signalling between hearing participants; added a basic **AI-powered case summarisation feature** using keyword extraction on submitted case documents to auto-generate a plain-text summary for the assigned judge, reducing document review time.

IPO Investment Tracker – IPO Manager *(Personal Project)*

React, Spring Boot 3, Spring Security, JWT, Docker, GitHub Actions, H2 github.com/dpreddysathi/ipo-manager

- Built and self-hosted a **full-stack IPO investment tracker** – **React** frontend on GitHub Pages, **Spring Boot** backend Dockerized on a home server – with **AES-256 encrypted KYC storage** and **JWT-based multi-user auth**.
- Implemented a **daily auto-sync of mainboard IPOs** with lot-size and allotment-date enrichment, plus **PAN-based allotment checking** via registrar integrations.
- Engineered a **person-to-person settlement ledger** with FIFO outstanding computation and a full transaction lifecycle (sent → allocated → settled).

Previous Internships

Web Developer Intern – Puducherry Technological University Mar 2023 – Apr 2023

Web Developer Intern – French Institute of Pondicherry (IFP) Jul 2022 – Aug 2022

Achievements

- Best Employee Trophy, EuroClear Tribe TownHall – Jun 2026
- On the Spot Award – Tata Consultancy Services
- Best Team Award – Tata Consultancy Services
- Runner-up, "Hunt the Code" competitive programming event, college level
- 300+ problems solved on LeetCode

Education

B.Tech – Computer Science and Engineering Aug 2020 – Jun 2024

Puducherry Technological University, Puducherry CGPA: 8.7
